**Wellington Studwelders** is a new division of [Wallace Building Contractors](http://Wallace Building Contractors) a specialist concrete and formwork company in business for over 60 years and involved in the construction of over 20 mid to high rise buildings in Wellington.

## ComFlor Approved Wellington Installers

ComFlor 60

ComFlor 80

ComFlor 210

**Wellington Studwelders** are the approved Wellington Installers of the [Comflor 80](#), [Comflor 60](#) and [Comflor 210](#) systems. Working with Composite Floor Decks Ltd in Auckland who provides engineering backup, welding consumables and shop drawing facilities we can now offer the first local Installers of Comflor products including supply, installation and composite through deck welding. Being Local our specialist installers can install Comflor in residential or commercial construction. We have installed over 24,000m<sup>2</sup> of Comflor in Wellington so far.

## Studwelding Equipment

**Wellington Studwelders** has recently purchased mobile Studwelding equipment to complete the Comflor installation and through deck Studwelding on the new Elevate apartments in Taranaki St and One Market Lane. We can now offer through deck Studwelding locally and our 270KvA generator which we have purchased for its light weight of 3500kg can be crane or hiab lifted easily to typically tight Wellington sites.

By running the metal decking over the top of the steel beams and welding through the decking we can create a composite floor decking system that spans further, saves propping, time and money by negating the need for end capping of the decking. We have the ability to weld up to 75m from the generator so this can be left on the ground floor if required.

**Wellington Studwelders** can also come to your site or workshop and weld shear studs straight to structural steel beams in a fraction of the time it would take to stick weld.

## Safety Equipment and Training

**Wellington Studwelders** have a wide range of certified fall protection equipment including safety netting, harnesses, lanyards, static lines and retractors. We also have welding blankets, fire extinguishers and specific Studwelding PPE when undertaking Studwelding.

**Wellington Studwelders** Installers are trained through Sitesafe and Vertical Horizons with NZS23229 as a minimum. Installation foreman are also trained in NZS15757 which means they can identify, construct and maintain height work equipment and fall arrest systems.
